Piercing after Care:

Thank you for coming to Nine Lives for your piercing! We hope it was a pleasurable experience.

The piercing was performed in a clean environment with sterile instruments and it is up to you to keep it clean.

- The piercing may be cleaned using saline solution. ½-1 teaspoon of sea salt, in cooled boiled water. (Never use water that is too hot or too salty!) Use kitchen towel dipped in the saline to wash the area. Clean it gently to avoid irritation! Always make sure to clean your hands first!
- Clean the piercing 2/3 times daily, in the morning and at night, maybe once during the day if needs be.
- There is no need to touch your piercing! Playing with your new piercing is the biggest cause of infection, irritation and migration. So leave it alone.
- Arnica 30 tablets will help your piercing to heal faster, (always read the instructions)
- Avoid swimming and taking baths for at least 2 months after being pierced. Any mass of water contains bacteria. Showers are fine, but try to keep shower gel away from the piercing while it is healing.
- Depending on how fast you heal the original bar/ring may be changed after 3-4 months. However if your piercing becomes infected during the healing process changing to P.T.F.E (synthetic material) can help the piercing to settle down.

If you have any worries or queries please ring us sooner rather than later, our friendly staff will be more than happy to help!
